	5	Operation	6	15%
	6	Repair & Maintenance	8	20%
		Sum	40	100%

Interpretation and Analysis: Table 1 presents the frequency count and percentage distribution of the 40 respondents according to age, educational attainment, position, length of service, and department.

In terms of age, the largest group of respondents was 30 to 39 years old, comprising 27 respondents or 67.5%. This was followed by those aged 40 to 49 years old with 6 respondents or 15%, those under 30 years old with 4 respondents or 10%, and those 50 years old or over with 3 respondents or 7.5%.

Regarding educational attainment, most of the respondents were college graduates, with 26 respondents or 65%. Six respondents or 15% were at the college level, four or 10% had master's education, three or 7.5% were at the high school level, and one or 2.5% was a high school graduate. No respondents were recorded under Elementary or Others.

Regarding position, the majority were Rank and File employees, representing 29 respondents or 72.5%. Seven respondents or 17.5% were Section Chiefs, while two or 5% were Department Managers, and two or 5% were Division Managers. No respondent was identified as a GM/AGM.

In terms of length of service, the largest group had been working for 10 to 20 years, with 17 respondents or 42.5%. Eight respondents or 20% had less than five years of service, another eight or 20% had 5 to 9 years, and seven or 17.5% had more than 20 years of service.

For department, the Commercial department had the highest number of respondents at 11 or 27.5%. Administrative and Repair & Maintenance each had 8 respondents or 20%, Operations had 6 or 15%, Engineering and Construction had 4 or 10%, and Finance had 3 or 7.5%. The summary therefore describes the demographic and employment characteristics of the 40 respondents who participated in the study.

Interpretation and Analysis:

Table 2 presents the perceived level of satisfaction of the 40 respondents in terms of Work Itself, Pay, Promotion, Supervision, Co-Workers, Company Policy, Working Conditions, and their Overall Level of Satisfaction. The results are presented using the mean, standard deviation, frequency, percentage, and descriptive interpretation.

For Work Itself, the overall mean was 2.75 with a standard deviation of 0.71, interpreted as Less Satisfied. Among the indicators, Personal Fulfillment from Job obtained the highest mean of 2.90 and was interpreted as Satisfied, followed by Extent of Challenge to Deliver with 2.80. Variety of Tasks Involved with 2.78, Responsibility for Planning with 2.73, and Opportunity to Improve Skills and Ability with 2.55 were all interpreted as Less Satisfied.

For Pay, the overall mean was 2.61 with a standard deviation of 0.66, interpreted as Less Satisfied. Obtaining Deserved Pay Increases was the only indicator interpreted as Satisfied, with a mean of 2.83. Meanwhile, Pay is Remunerative of Responsibility with 2.68, Regular Scheduling of Pay Increases with 2.55, Adequacy of Salary for Needs with 2.53, and Feeling of Financial Security with 2.48 were all interpreted as Less Satisfied.

For Promotion, the overall mean was 2.58 with a standard deviation of 0.78, interpreted as Less Satisfied. All indicators were interpreted as Less Satisfied, specifically Opportunity for Advancement in Work with 2.70, Promotion According to One's Ability with 2.65, Implementation of Next-in-Rank Policy with 2.58, Promotion Given to Qualified Employee with 2.55, and Promotion through Trainings and Seminars with 2.40.

For Supervision, the overall mean was 2.89 with a standard deviation of 0.59, interpreted as Satisfied. Respect, Support, and Fair Treatment obtained the highest mean of 3.08, while Appreciation for Good Job, Fairness in Planning and Scheduling, and Competence in Decision-Making were also interpreted as Satisfied. Supervisor Provides Basic Information obtained 2.78 and was interpreted as Less Satisfied.

For Co-Workers, the overall mean was 3.02 with a standard deviation of 0.50, interpreted as Satisfied. Friendliness obtained the highest mean among the indicators at 3.13, followed by Respect and Support with 3.10, Cooperation and Team-Spirit with 2.98, Working Relationships with 2.98, and Getting-Along and Concern with 2.90.

For Company Policy, the overall mean was 2.56 with a standard deviation of 0.59, interpreted as Less Satisfied. Fringe Benefits and Other Incentives obtained a mean of 2.95 and was interpreted as Satisfied. Conversely, Extent of Training/Seminars Provided with 2.63, Merits Given for Outstanding Job Performance with 2.48, Management's Response to Aired Complaints with 2.43, and Evaluation of Assignments and Jobs with 2.33 were all interpreted as Less Satisfied.

For Working Conditions, the overall mean was 2.69 with a standard deviation of 0.58, interpreted as Less Satisfied. Health Service for Emergency Situations obtained the highest mean of 2.98 and was interpreted as Satisfied. Adequacy of Tools and Equipment with 2.78, Lighting, Power, and Ventilation with 2.75, Adequate Work Space with 2.50, and Accident Prevention and Safety Regulations with 2.43 were all interpreted as Less Satisfied.

For the Overall Level of Satisfaction, the mean was 2.70 with a standard deviation of 0.61, interpreted as Less Satisfied. The frequency distribution shows that 25 respondents or 62.50% were Satisfied, 12 or 30.00% were Less Satisfied, 2 or 5.00% were Very Satisfied, and 1 or 2.50% was Not Satisfied. These results describe the respondents' perceived satisfaction across the different aspects of their work and their overall satisfaction.

TABLE 3

Table 3 Distribution of Statistics (mean, sd, test statistics) on the Level of Satisfaction among Employees of MERALCO when grouped according to Age.

Interpretation and Analysis:

Table 3 shows the distribution of the mean, standard deviation, and T-statistics on the level of satisfaction among respondents when grouped according to Age. The respondents were categorized into two groups: Group 1 consists of employees aged 39 years and below 31, while Group 2 consists of employees aged 40 years and above.

The parameters for the T-Test on Two-Sample Assuming Equal Variances were set with a Null Hypothesis stating that there is no significant difference in the level of satisfaction among respondents when grouped according to Age, and an Alternative Hypothesis stating that a significant difference exists. The level of significance was set at an alpha value of 0.05. Using a critical value of approximately ± 2.024 , the computed T-statistics were compared against the critical value to determine statistical significance.

Regarding the test statistics decision and conclusion, Work Itself yielded a computed T-statistic of 0.19, which does not reach the critical value and is marked as Not Significant. Therefore, the null hypothesis is retained, indicating no significant difference in Work Itself when grouped according to Age. For Pay, the computed T-statistic of -1.58 is marked NS, retaining the null hypothesis and showing no significant difference. For Promotion, the computed T-statistic of -1.70 is marked NS, retaining the null hypothesis and indicating no significant difference. For Supervision, the computed T-statistic of -0.02 is marked NS, retaining the null hypothesis and indicating no significant difference. For Co-Workers, the computed T-statistic of -1.60 is marked NS, retaining the null hypothesis and showing no significant difference. For Company Policy, the computed T-statistic of -1.96 is marked NS, retaining the null hypothesis and indicating no significant difference.

Conversely, for Working Conditions, the computed T-statistic of -2.52 exceeds the critical value in absolute terms and is marked significant. Therefore, the null hypothesis is rejected, and the alternative hypothesis is accepted, indicating a significant difference in Working Conditions when grouped according to Age. For Overall Satisfaction, the computed T-statistic of -0.43 is marked NS, leading to the retention of the null hypothesis and indicating no significant difference in overall satisfaction when grouped according to Age.

At the indicator level, significant differences were observed in Regular Scheduling of Pay Increases -2.26, Opportunity for Advancement in Work -2.62, Extent of Training/Seminars -2.86, and Adequate Workspace -2.40. Because the absolute values of these T-statistics exceed the critical value at the 0.05 level of significance, the null hypothesis is rejected for these specific indicators, while the remaining indicators did not reach the critical value and showed no significant difference.

Therefore, Table 3 indicates that the level of satisfaction generally does not significantly differ according to Age across most dimensions and indicators. Significant differences are particularly observed in Working Conditions and in the specific indicators concerning pay increases, advancement opportunities, training/seminars, and workspace.

TABLE 4

8. Overall	2.78	Less Satisfied	0.34	2.71	Less Satisfied	0.54	0.40 NS

Interpretation and Analysis:

Table 4 shows the distribution of the mean, standard deviation, and T-statistics on the level of satisfaction among respondents when grouped according to Educational Attainment. The respondents were categorized into two groups: Group 1, College Level and Below ($n = 10$), and Group 2, Graduate and Above ($n = 30$).

The parameters for the T-Test on Two-Sample Assuming Equal Variances were set with a Null Hypothesis (H_0) stating that there is no significant difference in the level of satisfaction among respondents when grouped according to Educational Attainment, and an Alternative Hypothesis (H_A) stating that a significant difference exists. The level of significance was set at an alpha value of 0.05. Using a critical value of approximately ± 2.024 , the computed T-statistics were compared with the critical value to determine statistical significance.

Regarding the test statistics decision and conclusion, Work Itself yielded a computed T-statistic of 0.46 and is marked as Not Significant (NS). Therefore, the null hypothesis is retained, indicating no significant difference in Work Itself when grouped according to Educational Attainment. For Pay, the computed T-statistic of 1.52 is marked NS, retaining the null hypothesis and showing no significant difference. For Promotion, the computed T-statistic of 0.12 is marked NS, retaining the null hypothesis and indicating no significant difference. For Supervision, the computed T-statistic of -0.64 is marked NS, retaining the null hypothesis and indicating no significant difference. For Co-Workers, the computed T-statistic of -0.25 is marked NS, retaining the null hypothesis and showing no significant difference. For Company Policy, the computed T-statistic of 0.00 is marked NS, retaining the null hypothesis and indicating no significant difference. For Working Conditions, the computed T-statistic of 0.84 is marked NS, retaining the null hypothesis and showing no significant difference.

Overall Satisfaction, the computed T-statistic of 0.40 is marked NS. Therefore, the null hypothesis is retained, indicating no significant difference in the overall level of satisfaction when respondents are grouped according to Educational Attainment.

At the indicator level, Obtaining Deserved Pay Increases obtained $T = 2.68$, while Regular Scheduling of Pay Increases obtained $T = 2.44$. Because both absolute T-values exceed the critical value of approximately ± 2.024 , the null hypothesis is rejected for these two indicators and the alternative hypothesis is accepted, indicating significant differences in perceptions of deserved pay increases and regular scheduling of pay increases when grouped according to Educational Attainment. The remaining indicators do not reach the critical value and therefore show no significant difference.

Table 4 shows that Educational Attainment does not produce a significant difference in the major satisfaction dimensions or in overall satisfaction. Significant differences are observed only in the two pay-related indicators identified above.

TABLE 5

Table 5 Distribution of Statistics (mean, sd, test statistics) on the Level of Satisfaction among Employees of MERALCO when grouped according to Position.

8. Overall	2.85	Satisfied	0.42	2.68	Less Satisfied	0.52	0.98 ^{NS}

Interpretation and Analysis:

Table 5 shows the distribution of the mean, standard deviation, and T-statistics on the level of satisfaction among respondents when grouped according to Position. The respondents were categorized into two groups: Group 1 consists of Supervisors ($n = 11$), while Group 2 consists of Rank and File employees ($n = 29$).

The parameters for the T-Test on Two-Sample Assuming Equal Variances were set with a Null Hypothesis (H_0) stating that there is no significant difference in the level of satisfaction among respondents when grouped according to Position, and an Alternative Hypothesis (H_A) stating that a significant difference exists. The level of significance was set at an alpha value of 0.05. Using a critical value of approximately ± 2.024 , the computed T-statistics were compared against the critical value to determine statistical significance.

Regarding the test statistics decision and conclusion, Work Itself yielded a computed T-statistic of 1.29 and is marked as Not Significant (NS). Therefore, the null hypothesis is retained, indicating no significant difference in Work Itself when grouped according to Position. For Pay, the computed T-statistic of 1.81 is marked NS, retaining the null hypothesis and showing no significant difference. For Promotion, the computed T-statistic of 1.03 is marked NS, retaining the null hypothesis and indicating no significant difference. For Supervision, the computed T-statistic of -0.08 is marked NS, retaining the null hypothesis and indicating no significant difference. For Co-Workers, the computed T-statistic of 0.45 is marked NS, retaining the null hypothesis and showing no significant difference. For Company Policy, the computed T-statistic of -0.09 is marked NS, retaining the null hypothesis and indicating no significant difference. For Working Conditions, the computed T-statistic of 0.64 is marked NS, retaining the null hypothesis and showing no significant difference.

For Overall Satisfaction, the computed T-statistic of 0.98 is marked NS. Therefore, the null hypothesis is retained, indicating no significant difference in the overall level of satisfaction when respondents are grouped according to Position.

At the indicator level, Extent of Challenge to Deliver obtained $T = 2.04$, while Feeling of Financial Security obtained $T = 2.27$. These values reach or exceed the critical value at the 0.05 level of significance, as reflected by the significant results in the table. Therefore, the null hypothesis is rejected for these two indicators and the alternative hypothesis is accepted, indicating a significant difference between Supervisors and Rank and File employees in terms of perceived challenge to deliver and financial security. The remaining indicators do not show a significant difference.

Interpretation and Analysis:

Table 6 shows the distribution of the mean, standard deviation, and F-statistics on the level of satisfaction among respondents when grouped according to Length of Service. The respondents were categorized into four groups: Group 1, Less than 5 years ($n = 8$); Group 2, 5 to 9 years ($n = 8$); Group 3, 10 to 20 years ($n = 17$); and Group 4, Over 20 years ($n = 7$).

The parameters for the Single-Factor Analysis of Variance (ANOVA) F-Test were set with a Null Hypothesis (H_0) stating that there is no significant difference in the level of satisfaction among respondents when grouped according to Length of Service, and an Alternative Hypothesis (H_A) stating that a significant difference exists. The level of significance was set at an alpha value of 0.05. For the four groups, the critical F-value is approximately 2.866.

Regarding the test statistics decision and conclusion, Work Itself yielded a computed F-statistic of 0.67 and is marked as Not Significant (NS). Because the computed F-statistic is below the critical F-value, the null hypothesis is retained, indicating no significant difference in Work Itself when grouped according to Length of Service. For Pay, the computed F-statistic of 2.09 is marked NS, retaining the null hypothesis and showing no significant difference. For Promotion, the computed F-statistic of 0.43 is marked NS, retaining the null hypothesis and indicating no significant difference. For Supervision, the computed F-statistic of 0.62 is marked NS, retaining the null hypothesis and showing no significant difference. For Co-Workers, the computed F-statistic of 1.25 is marked NS, retaining the null hypothesis and indicating no significant difference. For Company Policy, the computed F-statistic of 0.43 is marked NS, retaining the null hypothesis and showing no significant difference. For Working Conditions, the computed F-statistic of 0.79 is marked NS, retaining the null hypothesis and indicating no significant difference.

Overall Satisfaction, the computed F-statistic of 0.40 is marked NS. Therefore, the null hypothesis is retained, indicating no significant difference in the overall level of satisfaction when grouped according to Length of Service.

Interpretation and Analysis:

Table 7 shows the distribution of the mean, standard deviation, and F-statistics on the level of satisfaction among respondents when grouped according to Department. The respondents were categorized into three groups: Group 1, Administrative/Finance; Group 2, Commercial; and Group 3, Engineering and Technical.

The parameters for the Single-Factor Analysis of Variance (ANOVA) F-Test were set with a Null Hypothesis (H_0) stating that there is no significant difference in the level of satisfaction among respondents when grouped according to Department, and an Alternative Hypothesis (H_A) stating that a significant difference exists. The level of significance was set at an alpha value of 0.05. The results mark significant findings with an asterisk (*) and non-significant results as NS.

Regarding the test statistics decision and conclusion, Work Itself yielded a computed F-statistic of 0.54 and is marked as Not Significant (NS). The null hypothesis is retained, indicating no significant difference in Work Itself when grouped according to Department.

For Pay, the computed F-statistic of 2.62 is marked NS, retaining the null hypothesis and showing no significant difference. For Promotion, the computed F-statistic of 1.28 is marked NS, retaining the null hypothesis and indicating no significant difference. For Supervision, the computed F-statistic of 0.85 is marked NS, retaining the null hypothesis and showing no significant difference.

For Co-Workers, the computed F-statistic of 1.40 is marked NS, retaining the null hypothesis and indicating no significant difference.
